

Construction of 7 new solar kiosks

Ghana, February 2021: Completion of 7 new solar kiosks, each of which can now be used by 20 people interested in solar lamps and solar home systems.

Construction of a solar kiosk

In our project in Ghana, which is existing since 2018, we support the spread of solar home systems in Ghana together with our local partner Sunhut Enterprise and the German company Villageboom. An important step forward are the new 7 solar kiosks, whose construction could be completed in mid-February this year. This was also made possible by additional funding from GLS-Bank.

From now on, in each of the kiosks up to 20 people interested in solar lamps and solar home systems can rent a compartment. They can charge their cell phones or solar lamps there using the electricity generated on the roof. Optionally, they can also deposit additional money in the corresponding cash box in order to gradually purchase their own solar lamp or solar home system.
