

02.05.2019

In 2018, we celebrated the 10th anniversary of the cooperation between atmosfair and the project operator KPTL. In this decade, the efficiency of the biomass plant and the processes for biomass delivery and storage have been continuously improved. The plant has fed 44,695 MWh of renewable energy into the national grid in 2018 and has thereby saved 42,768 t of CO₂-emissions.
