TEMPLATE GUIDE Stakeholder Consultation Report v.2.0

This is a report template to be used for filling the information pertaining to Local Stakeholder Consultation and Stakeholder Feedback Round conducted in line with the Stakeholder Consultation and Engagement Requirements.

This document contains the following Sections

Key Project Information

Grouped Consultation Information

SECTION A - Information made available to Stakeholders

<u>SECTION B</u> - <u>Invitations made to Stakeholders</u>

<u>SECTION C</u> - Report of the Consultation Process

<u>SECTION D</u> - <u>Continuous input / Grievance mechanism</u>

SECTION E - Stakeholder Feedback Round

This template has been revised to aid a consistent interpretation and to better support project developers submitting documentation for certification. Please read the accompanying guide to understand how to complete this template accurately.

TEMPLATE GUIDE Stakeholder Consultation Report v. 1.2

Please delete blue text boxes upon completion

KEY PROJECT INFORMATION

GS ID of Project	GS12081
Title of Project	Implementation and operation of water kiosks in Burkina Faso – VPA2
Version number of this Report	1.0
Completion date of version	06/02/2023
Time of First Submission Date	15/02/2023
Start Date of the Project	08/12/2022
Date of Meeting (s)	17/12/2022
Project Cycle:	☐ Regular☑ Retroactive

GROUPED CONSULTATION INFORMATION

GS ID of Real Case VPA
Title of Real Case VPA
Geographical Boundary of Grouped Consultation
Technology covered by the Grouped Consultation
Validity Period
Anticipated number of VPAs

SECTION A. INFORMATION MADE AVAILABLE TO STAKEHOLDERS

A.1. Preliminary agenda for the meeting

The topics discussed in the Local Stakeholder Consultation of December 17, 2022 are summarized in the table below.

A.2. A non-technical summary of the project

The objective of the project is the implementation and operation of decentralized solar drinking water networks with several public 24/7 Water ATMs (hereinafter referred to as "water kiosks") across Burkina Faso. The water kiosks provide local populations access to safe drinking water and reduces waterborne diseases associated with unsafe water usage (and related to harmful gasses) during the combustion of firewood for boiling water.

At the moment, piped water connections are lacking, and current water sources are unreliable and distant, especially in the dry season and due to an ever-increasing population. The majority of the water sources are unsafe for drinking. Therefore, one part of the population treats the water by boiling it, using charcoal and firewood while the rest of the population does not undertake any water treatment, resulting in some cases of waterborne diseases.

The project therefore aims to displace water boiling and increase access to safe drinking water. It will lead to a replacement of firewood and a reduction of waterborne diseases.

A.3. Contact details to get further technical detail and project information

A.4. Summary of economic, social and environmental impacts of the Project

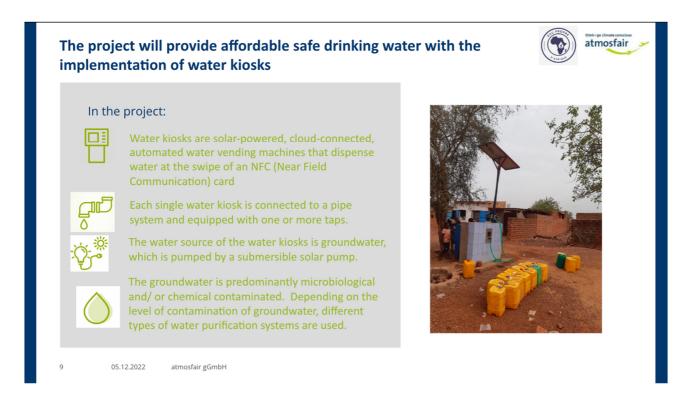

Generally, access to safe drinking water in many parts of Burkina Faso is limited. When households have access to water, the water is often badly contaminated with chemical contaminants (e.g. chloride, fluoride, iron, nitrates, and, salts) and microbiological contaminants (e.g. E. Coli). This poses a great threat to the population suffering from diarrheal diseases and deficiency disorders.

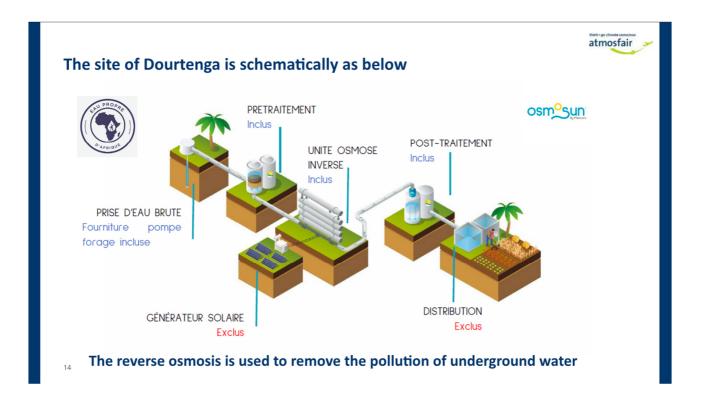

This project will provide access to safe drinking water, reducing water-borne diseases as well as health risks associated with burning charcoal or firewood to boil water. Replacing the boiling of water with solar-powered water treatment technologies reduces CO₂ emissions and stops deforestation. Regarding the economic aspects, improved and affordable drinking water supply and better management of water resources can boost the country's economic growth and can contribute to poverty reduction.

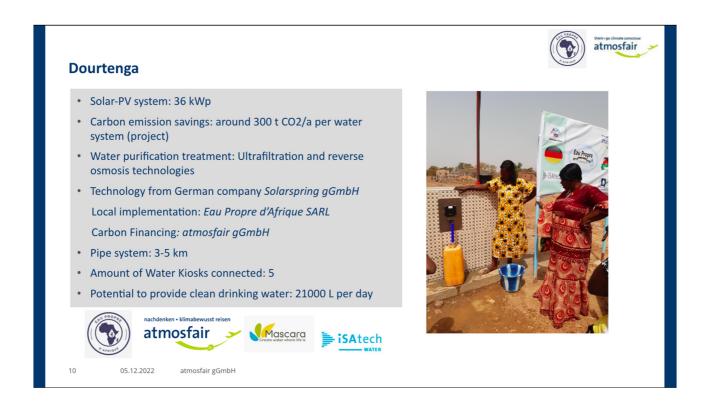

In line with the UN's Sustainable Development Goal (SDG), this project will contribute to:

- SDG 3 Good health and well-being: reducing adverse health effects related to water-borne diseases associated with unsafe water usage and related harmful gases during combustion of firewood for boiling water
- SDG 6 Clean water and sanitation: achieve universal and equitable access to safe and affordable drinking water for all
- SDG 8 Decent work and economic growth: achieve full and productive employment and decent work for all woman and men
- SDG 13 Climate action: integrate climate change measures into national policies, strategies and planning.

A.5. Other relevant information to help stakeholders understand the project

SECTION B. INVITATIONS MADE TO STAKEHOLDERS

B.1. Invitation tracking table

Please complete the table below

Category Code	Stakeholder Type/Organis ation (if relevant)	Name of invitee	Male/ Female	Method of invitation	Date of invitation (>30 days before Meeting)

B.1.1. Appropriateness of methods

Email invitations were sent out before the Stakeholder Consultation Meeting to those people using email as a main means of communication. Especially local people were invited through direct contact via Whatsapp, followed by written invitations.

B.1.2. Gender Sensitivity

Women's groups have been taken into the consideration throughout the whole process of stakeholder consultation, and actively participated in the physical meeting of the LSC. The consideration of women participation in the project implementation and management was also raised and answered during the stakeholder consultation. As women in Burkina Faso are most likely to be affected by the access to water and quality of water on a daily basis, their opinion and suggestion to the project are taken into consideration. Representatives from women's groups could be identified and were invited to attend the meeting.

B.1.1. Evidence proving invites took place as stated

Dear Sir or Madam,

The initiators of the project "Implementation and operation of water kiosks – PoA (GS10795), VPA 2 Burkina Faso" would like to invite you to the Stakeholder Consultation Meeting in order to inform you about the project activity and the technology. The goal of this meeting is to discuss with local stakeholders all aspects of the project with clear focus on sustainability indicators and climate protection.

The project is an initiative of the German non-profit organization atmosfair gGmbH and the local partner Eau Propre d'Afrique SARL in Burkina Faso. This project aims to provide universal and equitable access to safe and affordable drinking water and displace water boiling using non-renewable biomass or fossil fuels as means of water purification.

In order to receive feedback from you on these issues and to hear valuable suggestions and concerns, a Stakeholder Consultation Meeting is organized on

Saturday, December 17th 2022, 9:00am Primary School "Centre A", Dourtenga

Your presence (or that of your representative) would be highly appreciated, as your active participation will contribute to the success of this meeting. Please fill in the reply form enclosed and send it to moeller@atmosfair.de latest by December 14th, 2022 to help us organise the logistics.

Snacks and refreshment will be provided. If you are unable to participate, please feel free to comment on the Key Project Information enclosed, we would appreciate to receive your comments by email.

Thank you very much

Cher Monsieur, Chère Madame,

Les initiateurs du projet "Mise en place et exploitation de kiosques à eau - PoA (GS10795), VPA 2 Burkina Faso" souhaitent vous inviter à la réunion de consultation des acteurs afin de vous informer de l'activité du projet et la technologie. L'objectif de cette réunion est de discuter avec les acteurs locaux de tous les aspects du projet en mettant clairement l'accent sur les indicateurs de durabilité et la protection du climat.

Le projet est une initiative de l'organisation allemande à but non lucratif atmosfair gGmbH et du partenaire local Eau Propre d'Afrique SARL au Burkina Faso. Ce projet vise à fournir un accès universel et équitable à de l'eau protection de manière sécurisée et abordable et à remplacer l'utilisation de biomasse non renouvelable pour bouillir l'eau ainsi que l'utilisation de combustibles fossiles comme moyen de purification de l'eau.

Afin de recevoir vos réactions sur ces questions et d'entendre vos suggestions et préoccupations, une réunion de consultation des acteurs est organisée le

Samedi 17 Décembre 2022, 09:00 À l'école centre A de Dourtenga

Votre présence (ou celle de votre représentant) serait très appréciée, car votre participation active contribuera au succès de cette réunion. Veuillez remplir le formulaire de réponse ci-joint et l'envoyer à moeller@atmosfair.de au plus tard le 14 décembre 2022 afin de nous aider à organiser la logistique de cet événement.

Une collation et des rafraîchissements seront fournis. Si vous ne pouvez pas participer, n'hésitez pas à nous envoyer vos commentaires concernant les informations clés du projet ci-joint par e-mail. Cela nous serait d'une grande aide.

Merci beaucoup

B.1.2. Sample content of invites (for each Method above)

See Section B 1.3. as sample of invitation via Email. Samples of invitation via (i) Whatsapp and (ii) corresponding answers are provided below.

B.1.3. Description of other Means and methods to provide feedback for those who are not able to join the consultation meeting

atmosfair gGmbH facilitated feedback by providing the Key Project Information and the email contact of the project manager for those who could not attend the physical meeting.

SECTION C. REPORT OF THE CONSULTATION PROCESS

C.1. Date of Meeting

Date and Time 17/12/2022

Location

Dourtenga, Burkina Faso

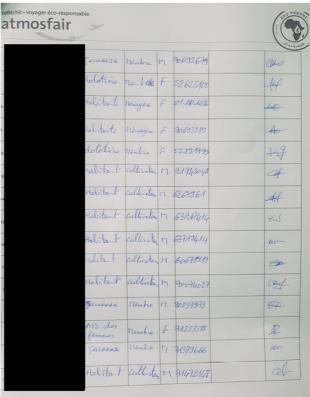

C.1.1. Justification of why consultation took place after the project start date (retroactive projects only)

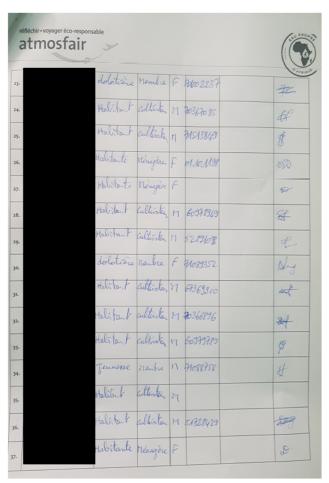

The project start date is the earliest date on which the project developer has committed to expenditures relates to the implementation of the project. On December 08, 2022, the final quotation for the supply of the water treatment system "Solaire Osmosun 6 BW" was signed by the project developer. All comments during the consultation were taken into account in the design and implementation of the project.

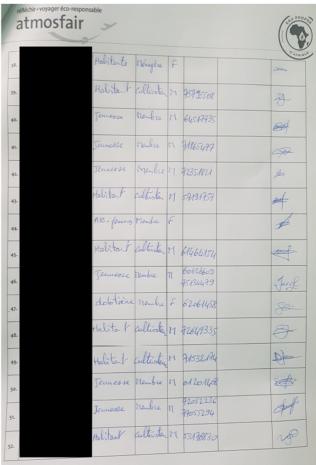

C.1.1. List of participants

Names of participants are redacted due to data protection.

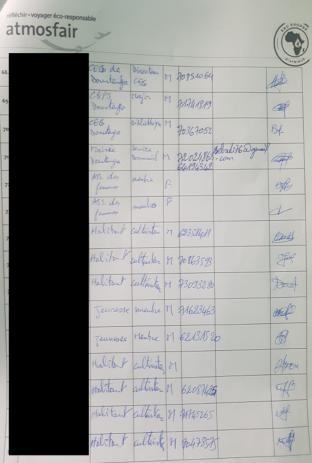

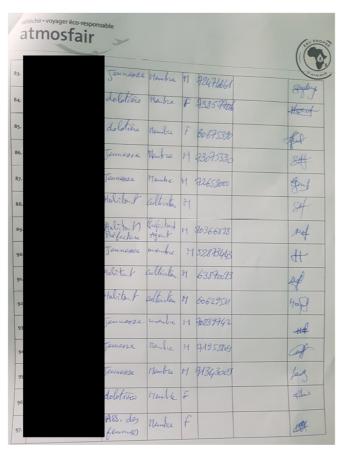

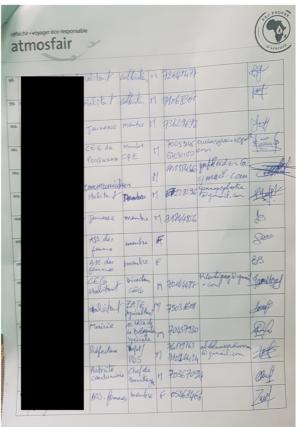

C.1.1. Pictures from the physical meeting(s) (best practice)

Presentation of the project by M. Eric YANNA (Managing Director of Eau Propre d'Afrique Sarl)

Participants to the consultation

Presence of the women group of Dourtenga to the consultation (with M. Eric Yanna in the foreground)

Participants to the meeting: From left to right, Mr. M. Segda (resident of Dourtenga), Chief of Tangonko, Its Majesty Mr. Naba Bulga

C.2. Minutes of physical meeting(s)

Report on the consultation meeting "Eau Propre d'Afrique" and the population of Dourtenga

On the Saturday 17th of December 2022, a consultation meeting took place in the reception room of the Dourtenga municipality, rural municipality of the province of Koulpélogo in Burkina Faso. The meeting took place in order to implement the project of the pumping of drinking water and was held between the beneficiary population of Dourtenga and the company "Eau Propre d'Afrique S.A.R.L.". The administrative, customary and religious authorities as well as the different social layers (men, women, children, associations) were present at this meeting.

Having for objective to lead a consultation with the local (from the municipality) stakeholders, in order to plan the meeting, invitations were sent more than 4 weeks before it took place. The invitations were sent to the inhabitants via the leaders of the different social layers.

- 10h Welcoming and preparation;
- Introduction;

- Presentation of Eau Propre d'Afrique & atmosfair;
- Presentation of the project
- Questions on the project;
- Positive and negative impacts of the project;
- Break;
- Grievance mechanisms;
- Closing and evaluation of the consultation;
- 13h Lunch;
- 16h final of the football game between the GEG and the high school on the departmental high school field.

It is worth mentioning that the meeting was initially supposed to take place at the "A" school of Dourtenga but because of the lack of electricity in the school, the meeting had to be relocated by the organization comity at the municipality.

To begin with, the participants enjoyed a musical and traditional (Kigba) dance performances given by the "Lagmbuudu" group of Kobré.

After this moment of joy, the floor was given to M. Pafdnam Boureima, ceremony master, in order to go through the consultation agenda.

Afterwards, and with the permission of his Majesty Naba "BULGA" who was present at the meeting, he welcomed the different participants.

He also allowed M. Léonard SEGDA, 1st vice-president of the Special delegation to wish welcome to the participants.

After M. SEGDA's speech, the ceremony master presented the executive director of the "Eau Propre d'Afrique Sarl" company, Mister Jean Éric YANNA, who is a son of Dourtenga residing in Germany for service reasons. Following this, he gave [M. Yanna] the microphone in order to present the second point of the consultation, be it, the presentation of "Eau Propre d'Afrique" and "Atmosfair".

Therefore, M. Yanna took the floor and with the injunction of his majesty "BULGA", he greeted the participants. He then explained that the objectives of the meeting with the stakeholders are to present the project and to get their recommendations as well as to see if they would want to participate in the implementation of the project.

Indeed, based on the speaker, the objectives of "Eau Propre d'Afrique S.A.R.L." fit with the Sustainable Development Goals (SDG) of the United Nations in regards to have an access to drinking water to all by 2030.

"Eau Propre d'Afrique Sarl" aims to create a pumping system to extract drinking water. The system will use an ultra-modern technique of water purification, which will be fed by solar panels with a capacity of 36kW in order to benefit the population of Dourtenga, hence the importance of this meeting.

This type of project with the partners takes place in several countries of Africa such as Togo.

Based on the project developer, the project will, with the support of the beneficiaries, implement 5 taps on a 5-kilometer-pipe during its pilot phase. The taps will provide 21.000 liters of drinking water per day. The total price of the project is around 150 millions of FCFA.

Following this PowerPoint presentation and the projection of videos with additional presentations, the different stakeholders asked their clarification questions and satisfactory answers were given by the project developer.

The population wished for the 1) extension of the pipe in order to reach other sectors/villages of the municipality, 2) the increase of the number of taps, which the population finds too little, 3) the pumping of water in schools for the students that still do not have an access to drinking water.

The participants also mentioned something that was very important for them, which is the lack of water for the off-season crops and the vegetable crops, which improve their life and health conditions.

M. YANNA promised to answer these questions at the appropriate time after consultation with the different project partners. He reassured [the population] that the question of food in school is very dear to him and that it also belongs to the SDG number 2 of the United Nations (a world without hunger), and this is relevant to improve the appropriation of the project.

Regarding the impact of the project, the population unanimously gave its approval for the implementation of the project, since it aims to improve their well-being because the water issue is very dire in the municipality. The population wished for an acceleration of the arrival and the beginning of the works of such a project how much laudable because at present the municipality is supplied by a very limited system which functions with diesel with recurrent shortages of supply.

Finally, Mr. YANNA asked the population to always provide their inputs and suggestions until the implementation of the project in early 2023. The master of ceremony invited the participants to stay for a community meal planned for the consultation. He also asked them to come back in the evening to attend a football match between two youth teams of Dourtenga, which is part of the activities of the day.

For a better understanding and to facilitate a good follow-up of this project, we wrote below the questions of the participants (stakeholders) as well as the answers brought by Mr. Yanna (Eau Propre d'Afrique) during the meeting:

Stakeholders: when will the project actually be implemented in our village?

Mr. Yanna: We intend to start the process on the ground at the beginning of January so that by the end of April at the latest we can have the precious liquid in the standpipes. We hope that the communal authorities and also the population will be all favorable to this project and that we will be able to have the necessary adhesion to progress quickly enough in the implementation

Stakeholders: has the project been financed, if so, by whom exactly and what are the expectations of the population of Dourtenga?

Mr. Yanna: The financing for the project presented today for the municipality of Dourtenga is fully secured. Eau Propre has taken a loan from the partners and more specifically atmosfair GmbH to be able to implement this project here. The sale of water at social price as presented today is the expected contribution of the population of Dourtenga. The population will be able to buy the cards similar to the one for telephone, and recharge it. Thus, the population can go to any terminal 24 hours a day to use the card as long as it is loaded.

Stakeholders: What will be the price of water at the terminal given that the quality is higher

than what we have from boreholes without treatment systems? Won't the prices go up and become inaccessible to the targeted population?

Mr. Yanna: Indeed, this is a very important factor that we are obliged to consider in our projects. We are obliged to orient ourselves to the provisions and limit provided for by the

law and regulations in force here in Burkina Faso. This means that the prices will be within the range of prices currently applied at the village level. The fact that the quality will be that of bottled mineral water should not worry you at all.

Stakeholders: Are individual house connections also planned and if so, will they be free?

Mr. Yanna: At the moment there are no plans for individual connections. But this could evolve according to the [field] conditions that we will continue to assess. And if these realizations should be made, they would certainly not be free. The eventual subscribers would be asked to contribute financially on an individual basis. However, I would like to remind you that this is not currently foreseen in this project that we are presenting here. Therefore, it would not be appropriate for people to pay anything for a so-called future connection in the name of the connection to come in the name of Eau Propre d'Afrique. I would like to refrain any involvement in this kind of action eventually.

Stakeholders: Is it possible to go beyond the 5 taps planned for this noble project?

Mr. Yanna: At the moment we have a budget that does not allow us to do more than what is planned. However, we are not set in stone and depending on the demand and membership we may re-evaluate the details and add extensions if technically possible because we would have to consider these aspects in addition to the budget itself.

Stakeholders: we have schools that do not have access to water. For example, school A where today's meeting should have been held is a perfect example. What is planned to improve the situation for the children and the most vulnerable?

Mr. Yanna: That's a great question that we've been thinking about as well. You all know here what education means to me because of the passion of Dad who himself taught here in Dourtenga. So, we thought it would be useful to bring our kiosks as close to the schools as possible and in our plans a kiosk is planned to be fixed at the level of school A precisely. It is the passage of the connection system as well as the optimal position of the different terminals that we should finalize with the administrative and customary authorities and also the landowners in order to obtain the necessary approvals and authorizations.

Stakeholders: Our village is not located directly in Dourtenga. We are 7 km away but we also have the problem of access to drinking water. Is it possible to consider us within the framework of this project?

Mr. Yanna: As we are only at the beginning of the collaboration, we are certainly somewhat limited. But in the course of the exchange, we can evaluate all these aspects as well. That is to say whether an extension is possible in time or whether we have the option to realize another site at a certain distance with a different planning. All this will certainly be a question of planning since our objective remains to be able to really contribute by 2030 to access drinking water to all the world and we are in Dourtenga today for that.

Stakeholders: Does the project also take into account access to water for animals? I say this because we are cattle herders and our herds often have the same needs as us humans.

Mr. Yanna: You are absolutely right with your question. The project as currently designed does not focus on the animals. This could be tackled differently since for livestock we don't necessarily need to treat the water as we do for humans. I confess that I have not yet made up my mind about this important aspect but I will be able to take it into account in the next developments of the project. Maybe it will even be possible to foresee an easily achievable option.

Stakeholders: What about the agricultural production component? Is it possible and planned in your interventions?

Mr. Yanna: I also admit that on this important aspect I have not yet precisely made up my mind. As for the livestock part, maybe it will even be possible to provide an option easily achievable. We are fortunate to have found a very fertile source rich in fertilizing elements for agricultural production. We are going to discuss with the partners, especially the landowners, to see to what extent the inclusion of this component is feasible. If the results are conclusive on a certain scale, we could certainly consider a duplication in the next phases and even include SDG 2: Zero hunger.

Stakeholders: What are your expectations in regards to the administration of the municipality of Dourtenga?

Mr. Yanna: A diligent support in the administrative steps essential for implementation in accordance with the law in force so that this component does not constitute an obstacle to success.

Stakeholders: What is the place of women in this kind of project?

Mr. Yanna: The role of women in all our projects is really central and we take very seriously the opinions of women in our concepts, in the implementation and in the management of our projects. You will see that here too in Dourtenga women will be the pillars of this project. This is very important and also unavoidable for the success of the collaboration which we mutually want to be fruitful. Moreover, I am really touched and amazed by this great mobilization of women today. All of this is a testimony that they are rightly committed to this project, which is certainly theirs too. I know very well what water means to you women and mothers, especially in your daily life. I am very, very grateful for all that you do in very difficult conditions so be very reassured of your role in my point of view on this subject.

Before closing the meeting, the participants were invited by Mr. Yanna to evaluate the meeting and the stakeholders were invited to continue to share their opinions in the comment cycle, making good use of the various channels available for this purpose.

Started at 10:00 am, the consultation framework with the stakeholders of Dourtenga ended around 1:00 pm under the blessings of his majesty Naba "BULGA" of Dourtenga.

Done in Dourtenga on the 17/12/2022

The secretary of the session

The President of the organizing committee

M. Justin Segda

M. Sylvestre Yanna

C.2.1. Minutes of other consultations

N/A (There's no other consultation).

C.3. Assessment of comments from all consultations above

Please complete the table below			
Gender of Stakeholder	Stakeholder comment	Was comment taken into account (Yes/ No)?	Explanation/ Justification (Why? How?)
N/A	Due to high-tech water treatment, the price of the water will be more expensive than one without water treatment	Yes	Affordability is a very important factor to consider in this project. This operation is obliged to orient towards the provisions and limit provided for by the law and regulations in force here in Burkina Faso. This means that the prices will be within the range of prices currently applied at the village level. To make the price affordable, carbon financing is also an essential non-negligible part of project.
N/A	Individual house connections should be also planned.	No	At the moment, there's no plan for individual connections. The possibility of individual connections depends on the field conditions and finance situation. But this scenario will not be further discussed in this project.
N/A	There should be more than 5 dispensers planned for the project	No	At the moment the budget does not allow us to expand the operation. But we may re-evaluate the details and add extensions if there's high demands and it's technically and financially possible.
N/A	There should be a closer connection	Yes	A dispenser is planned to be fixed at the level of school A (where

near schools.

stakeholder consultation was

		planned) precisely. It is the passage of the connection system as well as the optimal position of the different dispensers that we should finalize with the administrative and customary authorities and also the landowners in order to obtain the necessary approvals and authorizations.
N/A	Some villages are Ye far away from Dourtenga, they also have no access to water.	As we are only at the beginning, more project activities are planned and scheduled on the way. Exact locations and details will be determined based on local/regional conditions and technical feasibility.
N/A	There should also No be water system for animals and livestock.	This project as currently designed does not focus on the water supply of livestock and animal. This is not the main focus on this drinking water project, but it will be taken into consideration for future projects.
N/A	Demands for Year Agricultural irrigation should be taken into consideration.	The possibility of water supply to agricultural production is taken into consideration for this project. But final implementation plan depends on landowners as well as financial and technical feasibility.

C.3.1. Evaluation forms (best practice)

Please find below 6 representative samples of written evaluation form in English. Evaluation forms have been translated into English. The original forms are in French and can be found in the Annex I.

You may use the table format below to collect feedback on your consultation

Name	Dialla Iacouba
Gender – Male/Female:	Male
What is your impression of the meeting?	Very interesting project that comes about
	at the right time. This will somewhat
	reduce the increasing number of plastic
	packaging from water sold. The reunion
	took place in difficult conditions because
	the room was too small for the number of
	participants. There was an air problem
	because of the number of participants in
	the room.
What do you like about the project?	Very good project. Looking forward that the
	project managers realise it. It will make th
	population very happy.
What do you not like about the project?	Nothing to report
Signature	[signed]

Name	Koala Lacouba
Gender - Male/Female:	Male
What is your impression of the meeting?	Good impression because well explained,
	use of the national language. Massive
	participation of the population, the video
	confirms it.
What do you like about the project?	 The use of solar system No pollution in our environment Drinking water access to all
What do you not like about the project?	 The paying mode The fact that the accessibility doesn't go further than 5 km
Signature	[signed]

Name	Abga Sebgo Elise
Gender - Male/Female:	Female
What is your impression of the meeting?	Very Good
What do you like about the project?	Project that will help us very much when gathering drinking water.

What do you not like about the project?	Nothing to report.
Signature	[signed]

Name	Thiombiawo Casimér
Gender – Male/Female:	Male
What is your impression of the meeting?	Good initiative to reduce the economic
	burden. Good presentation.
What do you like about the project?	 New approach for community development Reducing waterborne diseases Protection of the environment
What do you not like about the project?	The project should consider the borehole that is already working in the municipality.
	The services are not considered for this firs
	phase.
Signature	[signed]

Name	Segueda P. Saïdou
Gender – Male/Female:	Male
What is your impression of the meeting?	Very good
What do you like about the project?	That it arrives in the village.
What do you not like about the project?	Should arrive quickly.
Signature	[signed]

Name	Bounga Telagie	
Gender - Male/Female:	Female	
What is your impression of the meeting?	Very good	
What do you like about the project?	21.000 liters of water in Dourtenga daily.	
What do you not like about the project?	Not a part.	
Signature	[signed]	

C.1. Summary of alterations based on comments

Based on the minutes, the project will be modified as follows:

- 1. At least 1 dispenser will be located at local school site.
- 2. Irrigation zone for agricultural purposes will be implemented by utilizing brine water produced from filtration of reverse osmosis system.

SECTION D. CONTINUOUS INPUT / GRIEVANCE MECHANISM

Please use the table below to report on the methods agreed with stakeholders

	Method Chosen (include all known details e.g. location of the book, phone, number, identity of mediator)	Justification of Choice (best practice)	
Continuous Input / Grievance Expression Process Book (mandatory)	·	made available at the Eau Pro d'Afrique office, checked regu by Eau Propre d'Afrique	•
GS Contact (mandatory)	help@goldstandard.org		
Telephone access (optional	French: Eau Propre d'Afrique: Mr. Jean-Eric Yanna +266 77785440 English: Mr. Kevin Möller (atmosfair gGmbH) +49 30 1208480-62	comments received via phone will be registered in grievance expression book	
Internet/email access (optional)	Eau Propre d'Afrique: yanna@eaupropre.org atmosfair: moeller@atmosfair.de	comments received by email was be registered in grievance expression book	will
Nominated Independent Mediator (optional)	-	-	
Other	-	-	

SECTION E. STAKEHOLDER FEEDBACK ROUND

☐ Please check this box if the project is retroactive and has done only 1	consultation
with a physical meeting integrated into the SFR.	

E.1. Length of the Feedback Round

Stakeholder Feedback Round		Planned	Actual
Start Date	01/05/2023		
End Date	01/06/2023		

E.2. Summarise how all stakeholders were/will be invited to provide feedback

The stakeholder consultation report together with the key project information will be uploaded to the atmosfair website, where it will be publicly accessible. Attendees of the physical meeting as well as stakeholders who could not attend the meeting will be informed via email and Whatsapp.

E.1. Summarise Feedback received, including if any changes in project design were made

N/A

TEMPLATE- v.2.0 Stakeholder Consultation Report

Revision History

Version	Date	Remarks
1.2	5 May 2022	Addition of grouped consultation info, preliminary agenda and section to justify retroactive consultation took place. Minor edits to text.
1.1	14 October 2020	Inclusion of Key Project Information Restructure, new headings and reorder to better match the steps a developer will follow in consultations. Removal of some non-mandatory template tables (Blind Sustainable Development Assessment). Clarification of best practice steps that are non mandatory processes, clarification of mandatory discussion points. Clarification regarding publishing names and that original evaluation forms (optional) and attendance lists (mandatory) should be separate documents. Improved clarity on Stakeholder Feedback round section and procedures for retroactive projects Provision of an accompanying Guide to help the user understand detailed rules and requirements
1.0	14 August 2017	Initial adoption

ANNEX I - Evaluation Form (Original documents)
